Read Me for International Keyboards (10/96)

Article Created: 21 October 1996

TOPIC ---

This article is the ReadMe for International Keyboards file.

DISCUSSION --

IMPORTANT KEYBOARD INFORMATION

This document provides late-breaking information that could not be included in
the PC Compatibility Card User's Manual or in the DOS Compatibility Software
Update User's Manual.

INSTALLING APPLE KEYBOARD FILES ON WINDOWS 3.1

1. Start Windows.
2. Insert the "International keyboard files" floppy in the drive.
3. Open the International control panel.
4. Select the desired language in the Keyboard layout area; then click OK.
5. In the Install Driver dialog box, click Browse.
6. Select the appropriate drive containing the keyboard file of the
   desired language. (Keyboard files have .dll file name extensions). The
   path is <floppy drive>\KEYBOARD\WIN31\<language>\<filename>.dll
7. Select the desired file, then close the control panel and restart
   Windows.

INSTALLING APPLE KEYBOARD FILES ON WINDOWS 95

1. Start Windows 95 and click the Start button.
2. Verify the keyboard file (file names have .kbd extension) for the
   desired language does not exist the System directory (under the
   Windows directory). Otherwise, delete it by dragging the file in the
   Recycle Bin and deleting.
3. Click on Settings; then select Control Panel.
4. Double click on the Keyboard icon.
5. Click on the Language tab.
6. If the language you desire to install already appears in the language
   list, select it and click on the Remove button.
7. Click on the Add button.

8. In the list that appears, select the desired language and click OK.
9. Click the name of the language whose keyboard layout you want to use;
   then click Set as Default.
10. On the bottom of the window, click on the Apply button.
11. At this point, a small dialog box for locating the keyboard file will
    appear if Windows is searching for the keyboard file for the first
    time.
12. Insert the "International keyboard files" floppy in the drive.
13. Click on the Browse button; then select the floppy drive.
14. In the Folders window, locate the folder containing the desired file,
    then click OK. The path is: <floppy drive>\KEYBOARD\WIN95\<language>
15. Make sure to switch the language in the keyboard bar on bottom right
    hand (this bar is where the current time appears).
16. Restart any applications that were running during the keyboard
    installation to active recently selected keyboard file.

ADDITIONAL INFORMATION

The keyboard drivers included on the "International keyboard files" floppy
correspond to the keyboard layout of the Apple Design Keyboard and the Apple ISO
Extended Keyboard II. Some of the drivers are updates to the ones included on
the PC Utility CD; users should install keyboard files from the floppy rather
than from the CD.

Keyboard drivers are included for Window 3.1 and Windows 95 in support the
following layouts: Belgian, British, Danish, Dutch, Finnish, French-Canadian,
French, German, Italian, Norwegian, Spanish, Swedish, Swiss-French

In some drivers, the numeric separator in the numeric keypad does not match the
separator of the Apple Design Keyboard and the Apple ISO Extended Keyboard II.
If that is the case with your desired keyboard driver, you should enter the
separator from the main portion of the keyboard.
