SoftWindows and the DOS Compatibility Card (3/94)

Article Created: 9 March 1994
Article Reviewed/Updated: 28 September 1995

TOPIC ---

How does SoftWindows and the DOS Compatibility Card compare as far solutions for
running DOS on a Macintosh?

DISCUSSION --

The Macintosh Quadra 610 DOS Compatible and the SoftWindows bundle on the Power
Macintosh are complementary approaches to provide cross-platform compatibility
solutions. The Macintosh Quadra 610 is the only Macintosh that supports the DOS
Compatibility Card. The Macintosh Quadra 610 DOS Compatible includes both a
Motorola 68040 and an Intel486sx microprocessor enabling customers to run
Macintosh, DOS and Windows software concurrently. It comes with MS-DOS 6.21. The
DOS Compatible Card does not provide NetWare, or any network support.

SoftWindows is a native Power Macintosh application that runs solely on the
Power Macintosh Computers. It emulates the 80286/287 microprocessors, and
provides application performance comparable to the speed of entry level 386 to
486 personal computers when running DOS and Windows applications. It comes with
MS-DOS 6.21 and Windows 3.1. SoftWindows also provides PC network support such
as Netware, LAN Manager, Windows NT Server, and TCP/IP.
