LocalTalk: Using with Windows NT (11/94)

Article Created: 1 November 1994
Article Reviewed/Updated: 16 November 1994

TOPIC ---

Can I connect to an AppleTalk network from a Windows NT server? Can I use a
LocalTalk cabling system? Are there any sources that document how to connect to
a Macintosh network from a Windows NT server?

DISCUSSION ---

With the installation of a Daystar Digita LocalTalk PC card, you can access
WindowsNT Server volumes using LocalTalk. This option is available under the
"Services for Macintosh" portion of the Windows NT Advanced Server 3.1 or
Windows NT Server 3.5 products.

With a LocalTalk PC card and ethernet card installed, the Windows NT Server
product can also serve as a router between ethernet and localtalk.

For Windows NT support over Ethernet, install the Macintosh services from within
Windows NT. The Windows NT documentation explains how to install the Macintosh
services portion of Windows NT. If you find that the documentation does not
give you the information you need, Windows NT Unleashed published by SAMS
Publishing is available.
