Power Macintosh: SoftWindows to DOS Compatibility Card (2/95)

Article Created: 28 February 1995

Article Reviewed/Updated: 29 September 1995

TOPIC -----

I have a Power Macintosh 6100/60 running SoftWindows, and I have now purchased a DOS card. I want to maintain my applications and data files on the SoftWindows partition. PC Setup will recognize the SoftWindows partition, but when I switch to the DOS Compatibility screen I get a message saying, "Missing Operating System". How do I access the SoftWindows partition?

DISCUSSION -----

A SoftWindows/Soft PC drive file cannot be used as the C: drive for the DOS Compatibility Card. However, the SoftWindows/Soft PC drive file can be used as the D: drive. The following steps show how to access the SoftWindows/Soft PC drive file with the DOS Compatibility Card.

Step 1

Install the DOS Compatible Card software including DOS.

Step 2

Use the PC Setup control panel and choose the SoftWindows drive file for the D: drive.

Step 3

Switch to the PC and the SoftWindows/Soft PC drive file is now accessible as drive D:
