AppleShare Windows Client: Best Routing & Lost Packets (7/95)

Article Created: 2 June 1995
Article Reviewed/Updated: 19 July 1995

TOPIC ---

This article describes a problem with NSI 1.5 installed on AppleShare File
Servers when AppleShare Client for Windows PCs transfer large amounts of data.

DISCUSSION --

The AppleShare Client does not use Best Routing completely. Without Best
Routing, a problem may occur which causes the router to pass the returning
packet to another router, rather than to the PC workstation. The Network
Software Installer (NSI) 1.5.1 installed on the AppleShare server fixes this. Be
sure NSI 1.5.1 is installed on the server.
