PC Setup Unimplemented Trap, Error Message (3/97)

Article Created: 5 March 1997

TOPIC ---

After installing Mac OS 7.6 and PC Compatibility 1.5 software, everything was
working fine. However, after installing Open Transport PPP 1.0 and restarting my
computer, I get this error message, "Sorry, a System Error Occurred. PC Setup,
Unimplemented Trap." What is wrong?

DISCUSSION --

During the installation process, the PC Setup preferences file was corrupted. To
resolve this, you need to throw the PC Setup preferences file in the Trash,
empty it, and restart your computer. A new PC Setup preferences file will be
created with default settings.
