TOPIC ---

Where do the modem CCL files go during AppleTalk Remote Access
installation?

DISCUSSION --

The installation process places the modem Connection Control Language (CCL)
scripts in the Extensions folder. The scripts appear in the pop-up menu in
the Remote Access Setup control panel.

Advanced users can look at the CCL scripts by changing the file type from
"mlts" to "TEXT" and reading it with any application that reads text files.
A HyperCard stack is available to assist in the development of CCL files.
This Modem Workshop tool allows you to interactively edit, run, and monitor
CCL scripts.

Installation also places the AppleTalk Remote Access and MNPLink Tool
extensions in the Extensions folder. These extensions create and maintain
a reliable connection.
