TOPIC ---

What is the AppleTalk Remote Access Remote Only adev?

DISCUSSION --

The Remote Only adev (AppleTalk device) is installed in the Extensions
folder and appears in the Network CDev. You can disconnect from the local
network and see only the remote network. Here are two situations where you
might need to do this:

- In the Event of a Network Number Conflict

  When a resource on the remote network has the same number as a resource
  on the local network, you can access the remote resource using the
  Remote Only adev.

- When You Have a Printer Port, and No Other Network Connections

  When you must use the printer port for something other than AppleTalk,
  you can use the Remote Only adev to free up the printer port. For
  example, a non-networked Macintosh with a serial printer connected to
  the printer port and a modem connected to the modem port.
