AppleTalk Remote Access: AppleEvents Support

TOPIC ---

What AppleEvents does the Remote Access application support? I'm
looking for a capability to request a connect and/or disconnect from the
AppleTalk Remote Access application via AppleEvents.

DISCUSSION --

Remote Access supports only the AppleEvents from the required suite:

- Open Application
- Open Document
- Quit Application

It doesn't support Print Document because AppleTalk Remote Access doesn't
have a print option.

After installing AppleTalk Remote Access, if you launch Remote Access
without configuring Remote Access Setup, a dialog box appears asking if you
would like to do so. At that point, AppleTalk Remote Access sends the
Finder an "Open" Remote Access Setup AppleEvent.

As an alternative, you may want to use the AppleTalk Remote Access
Application Programming Interface (API). It would be possible to have your
application access the API directly, or to have your application send an
AppleEvent to a program that accesses the API directly.

Details of the API external reference specifications are available from
APDA in the AppleTalk Remote Access Developer's Toolkit. Part number
R0128LL/A.
