AppleTalk Remote Access and Tymnet (2/96)

Article Created: 7 December 1992
Article Reviewed/Updated: 9 February 1996

TOPIC ---

Can I use AppleTalk Remote Access (ARA) to connect to an ARA system via
Tymnet? I can dial up a Tymnet modem, input a terminal type (a character
"A" or "O"), input my network username and password, and then Tymnet
connects me (via hard- wired connection) to a Macintosh running ARA. Is
this possible with ARA?

DISCUSSION --

You can use the Apple Remote Access Multiport Server X.25 Extension to use ARA
over an X.25 network such as Tymnet or Sprint.

See the TIL article "ARA and X.25: MultiPort Server X.25 - Description" for more
information.

Article Change History:
09 Feb 1996 - Updated with X.25 Extension information.
06 Jan 1993 - To show additional information received.
