ARA Answer Problem With Dayna EtherPrint (7/93)

Article Created: 2 July 1993

TOPIC --

I'm getting the following error message when I try to turn on answering in
AppleTalk Remote Access (ARA), "A Remote Access Setup error has occurred.
Unable to acquire AppleTalk node on current network."

I'm on LocalTalk, connected to an EtherPrint. When I disconnected the
LocalTalk cable from the Macintosh, everything worked OK.

DISCUSSION ---

We checked with Dayna, and it turns out that they have seen this problem
before. It may be due to ROM revisions in the EtherPrint. The best
solution is to refer the customer to Dayna. Dayna Tech Support told us
this can usually be solved by powering down the computer and the
EtherPrint. Then set the EtherPrint to AppleTalk Phase 1, power it up,
power it down again, reset it to AppleTalk Phase 2, and then power it back
up again.

To locate a vendor's address and phone number, use the vendor name as a
search string.
