ARA 2.0: Starting the MultiPort Server After Booting (11/93)

Article Created: 15 November 1993

TOPIC ---

This article describes what needs to be done to start the Apple Remote
Access MultiPort Server immediately after the server's computer boots.

DISCUSSION --

The Remote Access Manager application does not have to running for the
server to be active. However, the Remote Access Manager must be run once
to start up the server. After that, you can quit the Remote Access Manager
and the server will keep running.

If you want the server to automatically start up when the server's computer
is booted up, place the Remote Access Manager application (or an alias) in
the Startup Items folder, located in the System Folder.
