## ARA MultiPort Server and Memory (3/94)

Article Created: 4 March 1994

TOPIC -----

ARA MultiPort Server version 2.0 has a problem with locking memory that will be fixed in the next release.

DISCUSSION -----

The Remote Access Manager application version 2.0 leaves a small locked block in the MultiFinder (Process Manager) heap after the user quits. It is verified that this island in the PM heap could reduce your "Largest Unused Block" size significantly. Engineering has agreed on a fix, which they will begin testing for the next release.
