ARA 2.0.x: Macintosh Portable Problem & Solution (5/94)

```
Article Created: 26 May 1994
Article Reviewed/Updated: 3 June 1994

TOPIC -----------------------------------------------------------

I'm trying to use Apple Remote Access (ARA) Personal Server 2.0 with an original
Macintosh Portable with an Apple 2400 internal modem.  I get no response from
the modem when trying to dial.  I have tried all of the available 2400 baud
scripts, including the Apple 2400 and Hayes 2400 scripts.  I'm able to dial with
other terminal programs.

DISCUSSION ------------------------------------------------------

It turns out that there's a pretty simple solution.  Use the Apple Modem 2400
CCL from ARA 1.0.  It works fine, and we have verified it.

We tested both ARA Personal Server 2.0 and 2.0.1 with a Macintosh Portable and
reproduced your problem.  The solution above resolves this problem for both ARA
PS 2.0 and 2.0.1.  We have reported your problem, and we're awaiting
resolution.
