ARA 1.0 & 2.x: Connection Document Compatibility (2/95)

Article Created: 23 February 1995

TOPIC ---

I have upgraded from Apple Remote Access (ARA) 1.0 to 2.x. I want to know if I
can continue to use the connection documents saved under ARA 1.0, or do I have
to create new connection documents for ARA 2.x?

DISCUSSION --

ARA 2.x connection documents contain additional resources not found in 1.0
connection documents. These resources are used to provide the additional
functionality offered by ARA 2.x such as using Dial Assist, dialing an alternate
number, and compatibility with 1.0 servers. Despite these differences the
documents are interchangeable, ARA 1.0 simply ignores the additional resources.
When a user upgrades from 1.0 to 2.x the old connection documents can be used.
It is not necessary to create new connection documents. The first time an old
document is saved under 2.x it will be updated to contain the new resources.

CCLs written for ARA 1.0 can be used with ARA 2.x but will not support the added
features in 2.x such as blind dialing. For example, the Express Modem software
provides two CCL files, one for use with 1.0 and one for 2.x. Check with the
modem manufacturer for the proper CCL to use.
