## ARA CCL Scripts for GeoPort and Express Modem (4/95)

Article Created: 12 April 1995

TOPIC -----

This article describes the preferred modem scripts for Apple Remote Access (ARA) when using the GeoPort Telecom Adapter or Express Modem.

DISCUSSION -----

GeoPort 2.0 Telecom Adapter connection (CCL) scripts

- ARA 1.0: GeoPort Telecom ARA 1.x (in Extensions folder in System Folder)
- ARA 2.0: GeoPort Telecom ARA 2.x (in Extensions folder in System Folder)

Two additional, optional connection (CCL) files, named GeoPort Telecom ARA 1.x/CNG and GeoPort Telecom ARA 2.x/CNG, are installed as well. When you use them, the GeoPort Telecom Adapter transmits data calling tones after dialing. Data calling tones allow the remote machine to detect automatically that an incoming call is a data modem call. If you are dialing into a system that supports data, fax and voice calls (such as another GeoPort Telecom Adapter) you should select it in the Apple Remote Access Setup control panel.

Note: The GeoPort Telecom ARA 1.x/CNG and GeoPort Telecom ARA 2.x/CNG files are installed in the Telecom Documents folder. Should you decide to use these optional files, you'll need to drag or copy them to the Extensions folder.

Express Modem connection CCL scripts

- ARA 1.0: Express Modem 14400
- ARA 2.0: Express Modem ARA 2.0 (Modem Documents folder on installer disk)
