## System 7.5 Only and ARA: Extensions and Control Panels (11/95)

Article Created: 16 November 1995

TOPIC -----

I want to verify that Apple Remote Access (ARA) is not conflicting with another extension. Beside choosing System 7.5 Only, in the Sets pop-up menu of the Extensions Manager control panel, what other extensions do I need to enable?

DISCUSSION -----

In the Apple Menu folder: Remote Access Disconnect  
In the Control Panels folder: Remote Access Setup  
In the Extensions folder: Remote Access Aliases and Remote Only

Enabling System 7.5 only and ARA extensions and control panels may not find the conflicts or system corruption you are investigating, because ARA loads resources in the System file also. A clean system software installation may be required if issues persist, even with only these extension loaded.
