## Apple Remote Access Client 2.1: Description (6/96)

Article Created: 20 Jun 1996

TOPIC -----

This article describes Apple Remote Access (ARA) Client 2.1.

DISCUSSION -----

Apple Remote Access Client software provides an easy, productive, and secure way to connect a desktop Apple Macintosh or PowerBook computer to information and resources at a remote location. And because it works with all Apple Remote Access compatible servers -- including the Apple Remote Access MultiPort Server and Personal Server software -- it lets you choose the level of server support you need, whether you belong to a small workgroup or a multinational corporation.

Apple Remote Access Client is designed with efficiency and productivity in mind. It installs in minutes and is remarkably easy to use, minimizing the need for ongoing support. For example, the software's built-in DialAssist technology makes dialing back to the office network simple, even for international travelers. It lets you build dialing sequences that help mask the complexities of the worldwide telephone system -- so you can connect easily from anywhere in the world. And Apple Remote Access Client has features that help you manage everything from repeat connections to connection time.

In addition, because it supports the Mac OS, Apple Remote Access Client software lets you work with such familiar features as the Chooser, the Finder, and the Alias Manager. In short, it provides everything Macintosh or PowerBook users need to help them get their work done easily and efficiently -- wherever they are.
