AppleShare: Alphanumeric Characters Only for User Names

This article last reviewed: 1 May 1989

Users have complained that they cannot change the access privileges on folders created in AppleShare 2.0.1. The response received when trying to change privileges is, "User ID not known". This seems strange, because all characters are accepted when an account name is defined.

The fix is to ensure that only alphanumeric characters appear in registered user names. That is, "Albert Cohoe 3933440" works properly, but "Albert Cohoe: 393-3440" does not.
