## AppleShare: Server Startup with External Drives Attached

Article Created: 5 April 1991

Article Last Updated:

TOPIC -----

The Macintosh that I'm using as an AppleShare server has an internal hard disk and two external volumes. In case of a power failure, I have the server set restart automatically. The problem is that the Macintosh checks for the external SCSI drives before the drives are ready.

Is there a way to make the server wait 30-60 seconds before checking for SCSI devices?

DISCUSSION -----

There is no way to have the server wait before it looks for available drives. The server waits for Drive 0 to be ready, though. By the time Drive 0 is ready and loaded, the other drives should be ready to mount. Copyright 1991, Apple Computer, Inc.
