AppleShare: Access Error on Workstations Using System 6.0.5

Article Created: 4 December 1992

TOPIC ---

We have AppleShare workstations using system software version 6.0.5, and an
AppleShare 3.0 server. We created a drop folder within a folder that has
privileges set to See Files and See Folders but not to Make Changes. We're
getting an Access Error when moving a file into the drop folder. We have
no problems from a System 7.0 workstation. We tried with both AppleShare
2.0 and 3.0 workstation software on the workstations.

DISCUSSION --

Upgrade the workstations to use system software version 6.0.7 to solve the
problem.
