AppleShare: Excel 2.2 Can't See Files in Subfolders

Article Created: 4 December 1992

TOPIC -----

An AppleShare file server version 2.0.1 has an Excel spreadsheet buried in folders three levels deep. Everyone can see the files. One client can't open the Excel file, but can see it and copy it to the hard disk, and then open it. The client can open the file from a different computer using his password and access privileges -- so it isn't an access issue with AppleShare. He can also open the file if it's moved up one folder level on the server.

What is going on here?

DISCUSSION -----

This can occur if you're using Excel 2.2. Excel can't see a file when it's more than two levels deep. Upgrading to Excel 2.2a fixes the problem. Copyright 1992, Apple Computer, Inc.
