## AppleShare File Server: When You Can't Throw Away Files

This article last reviewed: 19 February 1991

TOPIC -----

When I'm logged on as the Administrator of my AppleShare server, the system locks up and bombs whenever I try to throw away folders with duplicate data in them. If I go to the file server and start up with an AppleShare Admin Disk, I can throw these folders away.

DISCUSSION -----

The locking up and bombing problem while throwing away folders could be caused by a couple of things. Try these steps:

1. Rebuild the desktop by holding down the Command and Option keys while the system is starting up from a floppy disk.
2. If the problem persists, reinstall the System and AppleShare software, as there may be some pointers to the Desktop and Finder that could be corrupted. This would explain why files can be thrown away when booted from a floppy.
