TOPIC -----------------------------------------------------------

I can't make my AppleShare Print Server accept print files from System 7
drivers.  The AppleShare Print Server doesn't see the "Prep" file on the
server that matches System 7.

DISCUSSION ------------------------------------------------------

The Laser Prep file is now included in the System 7 LaserWriter driver.
Apple also includes a System 7 Prep file that is separate from the
LaserWriter driver specifically for the AppleShare Print Server.

Copy both the System 7 LaserWriter Driver and the System 7 LaserWriter Prep
file over to the AppleShare Print Server.  This prep file is needed only on
the server, not your individual workstation.
