TOPIC -----

This article describes the functions of the Access Information dialog box.

DISCUSSION -----

The administrator can perform the following functions in the Access Information dialog box.

- Share folders and volumes.
- Lock a file: This is similar to locking a file in the Finder's Get Info window.
- Copy-protect a file: This prevents making Finder copies of a file, but certain utilities can still copy the file.
- Limit launches: This limits the number of times users can simultaneously launch an application.
