AppleShare: Internal Bridging Support

Article Created: 14 May 1991

Article Last Reviewed: 27 May 1991

Article Last Updated:

TOPIC -----

Does AppleShare support internal bridging in the server (I want to use AppleTalk and EtherTalk), or must I only use EtherTalk and then use an Ethergate to convert back to LocalTalk?

DISCUSSION -----

AppleShare itself does not inherently support internal bridging. If you wish to use a software bridge, the Apple Internet Router will bridge between the two physical media and run in the background of an AppleShare server.
