AppleShare Workstation: Use Installer that Comes With Computer

Article Created: 14 June 1991

Article Last Reviewed:

Article Last Updated:

TOPIC -----

When I use the AppleShare Workstation Installer 2.0 to prep a Macintosh IIcx workstation using the Macintosh II option (only that option was offered), my computer doesn't restart. I had to totally reinstall the System with the Installer along with Installer's AppleShare workstation option.

DISCUSSION -----

AppleShare software has not been updated in over 2 years. The installer scripts that come with AppleShare do not work properly with computers that have been introduced since that time. New computers come with their own installers that install both the AppleShare workstation and server.
