AppleShare: Problems Using Chooser with Apple II Computers

Article Created: 14 June 1991

Article Last Updated:

TOPIC -----

I recently set up an AppleShare Network with Apple II and Macintosh computers. All seemed well except for a small item on the Apple II side.

Using Aristotle, everything works fine except the Chooser.

When trying to use Chooser, the window opens to show the application just short of finishing. The Chooser then stops with a message that it cannot load or open:

```
/System/System.Setup/ATInit
```

How can I repair the above file without reinstalling the entire AppleShare network?

DISCUSSION -----

If you're using Apple IIGS computers, you don't need to use the Chooser anymore. Select printers with the Control Panel.

If you're using Apple IIe computers, be sure you use the AppleShare Apple II Setup Disk 2.1.1 or greater when setting up your server.
