TOPIC -----

I have a Macintosh SE/30 file server running System 6.0.5 and AppleShare 2.0.1. There are Macintosh LC and Macintosh Classic computers on the network. Will the file server need to be upgraded to System 6.0.7, and is AppleShare 2.0.1 still okay to use?

DISCUSSION -----

You do not need to upgrade the file server's system software, and AppleShare 2.0.1 will work just fine.
