TOPIC -----

If a System 7 user creates a drop box on an AppleShare server, a 6.0 user can't see it. Is there a fix?

DISCUSSION -----

A System 7 user would not be able to see this folder either. The drop folder was created in an area where the user doesn't have access privileges. You must create a drop folder within a folder that the user can access. The folder itself cannot be the share point. Since a user can't "See Folders" on a drop folder, it makes sense that they would be unable to mount that folder as a share point.

Create a folder named "Drop Folders" with all privileges except "Make changes." Within that folder make your drop folder. That should solve the problem.
