AppleShare 4.0 and Macintosh Computers Supported (8/93)

Article Created: 18 August 1993

TOPIC -----

- 1) Is AppleShare 4.0 supported on a Quadra 900 and 950? I have conflicting information regarding the Quadra 950.
- 2) Also, will AppleShare 4.0 be supported on the new Centris 660AV, or Quadra 840AV?

DISCUSSION -----

- 1) AppleShare 4.0 was tested on only four hardware platforms. These platforms are the Centris 610 (AWS 60), Quadra 700, Quadra 800 (AWS 80), and Quadra 950. As a result these are the only "officially supported" AppleShare 4.0 platforms.

Given the similarity between the Centris 610 and 650, and the Quadra 900 and 950, it's quite likely that AppleShare 4.0 will run on those two platforms, but they are NOT SUPPORTED.

- 2) AppleShare 4.0 was not tested on the Centris 660AV and Quadra 840AV. The differences between the supported platforms (Centris 610, Quadra 700, Quadra 800, and Quadra 950) and the new Centris 660AV and Quadra 840AV platforms are greater than the two unsupported computers (Centris 650, and Quadra 900) mentioned above. The Centris 660AV and Quadra 840AV MAY, OR MAY NOT be tested in the future, but they are strongly NOT SUPPORTED with AppleShare 4.0.
