Disable Auto Log On To Nonexistent AppleShare Volume (5/95)

Article Created: 3 May 1995

TOPIC -----

When my Macintosh boots, an AppleShare log on dialog appears for server volumes which no longer exist on the network. How can I get rid of these attempts to log on to nonexistent server volumes?

DISCUSSION -----

Automatic log on can be disabled by throwing the AppleShare Prep file (System Folder: Preferences: AppleShare Prep) in the trash. Removing this file will eliminate automatic log on for all server volumes. Restoring automatic connection to specific server volumes at startup can be accomplished in the usual fashion.

NOTE: Some third-party software, like Suitcase, will also attempt to mount remote volumes at startup. Vendors should be contacted for instructions on disabling automatic log on their own software.
