AppleShare 4.1 and Apple Internet Router 3.0.1 Issue (8/95)

Article Created: 23 August 1995

TOPIC -----

Since installing Apple Internet Router 3.0.1 software on an Apple Workgroup Server, AppleShare 4.1 fails to launch with the this error message, "coprocessor not installed error".

DISCUSSION -----

AppleShare 4.1 uses a more recent version of the Apple Shared Library Manager (ASLM) than what is installed by the Internet Router.

Apple Internet Router 3.0.1 installs Shared Library Manager 1.0. While AppleShare 4.1 needs Shared Library Manager 1.1.2 or higher.

The issue can be resolved by performing a custom install of AppleShare 4.1 and selecting Shared Library Manager.
