AppleShare Client 3.6.1: Speed Copy 1.1 Compatible Issue (2/96)

Article Created: 28 February 1996

TOPIC ---

On Connectix Corporation's World Wide Web site is a patch called AppleShare
3.6.x Patch. The documentation indicates this patch is posted to correct a
compatibility issue with AppleShare Workstation v3.6.1 and Speed Copy 1.1.

Is this Connectix patcher modifying Apple code, an extension which can be
removed, or modifying Speed Copy? This may cause a problem when troubleshooting,
if Apple code is modified, because it will be difficult to set a computer to
only Apple extensions and control panels.

DISCUSSION ---

The Connectix patcher is an extension and Read Me, and we were told, is needed
for Speed Copy to work specifically with AppleShare Workstation v3.6.1. This
patcher corrects a issue with files being corrupted during copy operations.

The patch is an extension that fixes the AppleShare Workstation 3.6.1 software
in RAM by disabling the read and write caches. This results in performance loss
when coping files to or from an AppleShare 4.2.x file server.

AppleShare Workstation v3.6.1 client software will be included in the next
release of System System and System 7.5 Update 2.0, so this compatibility issue
will be around for a while. This patcher is not expected to be required for
AppleShare Workstation v3.6.2 which is included with the Workgroup Server 7250
and 8550 computers.
