## AppleShare 4.2.1: More Memory for File Server Program (5/96)

Article Created: 21 May 1996

TOPIC -------------------------------------------------------------

Does AppleShare 4.2.1 perform better if additional memory is allocated to the
AppleShare File Server application?

DISCUSSION --------------------------------------------------------

No, with AppleShare 4.2.1 the AppleShare File Server application that you see in
the Apple menu is really a facade application, and it does not really do the
work of file sharing. The suggested memory allocation of 200K is all that is
needed. There is no practical benefit from expanding the amount of memory for
the application partition.

The file server program (strictly speaking, the File Server Extension) is an
extension, and giving it more memory is not a finder operation. For more
information on AppleShare File Server memory and cache, search for Technical
Information Library article, "AppleShare 4.2.x: File Server Memory & Cache
Usage."
