AppleShare Workstation 3.6.2 & System 7.5.3 Performance (6/96)

Article Created: 11 June 1996

TOPIC -----

I have Power Macintosh computers running System 7.5.3, AppleShare Workstation 3.6.2 connecting to an AppleShare File Server 4.2.1 on a 10Base-T network. I'm getting complaints from users that they are getting slower performance in Finder Copies, to or from the server, than they were with computers were running System 7.5.2 and AppleShare Workstation 3.6.1.

Is there an issue with the AppleShare Workstation 3.6.2 software running with System 7.5.3 in regards to performance?

DISCUSSION -----

The issue you describe is known, and it will be resolved in the version of AppleShare Workstation that ships with the next major revision of AppleShare.

Apple is also considering the possibility of including a fix, to the AppleShare Workstation, in a system update release.
