AppleShare Workstation 3.6.5 Read Me (1/97)

Article Created: 28 January 1997

TOPIC -----

This article is the AppleShare Workstation 3.6.5 ReadMe file.

DISCUSSION -----

Contents

Changes from AppleShare Workstation 3.6.2
Changes from AppleShare Workstation 3.6.3 & 3.6.4
System Software recommendations

Changes from AppleShare Workstation 3.6.2

• AppleShare Workstation 3.6.2 was modified to allowed the user to change his or her password during alias resolution. This modification caused two problems:

- Utilities (such as virus-protection utilities) that patch GetResource could cause AppleShare Workstation software to crash when opening an alias that required a password.
- The system could hang if a background application performed file I/O while an alias that required a password was being opened.

For AppleShare Workstation 3.6.3, this modification was removed. It will be re-implemented in a future version of AppleShare Workstation software.

• A conflict with applications that quit the Finder, notably the Apple Installer, was fixed.

Changes from AppleShare Workstation 3.6.3 & 3.6.4

• AppleShare Workstation 3.6.3 and 3.6.4 differ only in the bundle bit being set on the AppleShare extension.

• AppleShare Workstation 3.6.5 fixes some internal version strings that were not updated with 3.6.4.

System Software recommendations

-
- Computers running system software prior to 7.5.1 should run AppleShare Workstation 3.5.
 - Computers running system software 7.5.1 or later should run AppleShare Workstation 3.6.5.
