AppleTalk Internet Router and Text Color Change

Article Created: 20 January 1993

TOPIC -----

Why does the text color change in the network information window in AppleTalk Internet Router 2.0? I am referring to the text in the window, not just the column title text. The column titles are blue but the text in the window turns red for a few seconds and than back to black. What causes the change to happen?

DISCUSSION -----

From pages 82 and 83 of the AppleTalk Internet Router Administrator's Guide:

The routing table is a dynamic display that reflects continuous changes in routing information on the internet.

The larger the internet, the more likely it is to be undergoing change, as routers update one another about alternate routes, distances, and changes in network connections.

...

Note: Whenever a change is made to an entry in the routing table, that item is boldfaced for a few seconds to call your attention to the change.

The last paragraph answers the question. On a color screen, the item that is updated is boldfaced and change to red for a few seconds. When this occurs, it does not mean that something is wrong, it just means that something has been updated.
