Internet Router: Needs One EtherTalk Card To Run 1.2 AND 2.0

This article last reviewed: 28 September 1989

TOPIC ---

In the EtherTalk documentation, it mentions that I can run both EtherTalk 1.2
and EtherTalk 2.0 on the same machine until my migration is complete to
AppleTalk Phase 2.

Do I need two EtherTalk Cards in the router machine to accomplish this?

DISCUSSION -----------------------------------

No, only one EtherTalk Card is required to communicate in EtherTalk 1.2 and
EtherTalk 2.0 packets on the same network.

Complete details on this, including installation, are in Chapter 3 of the
"AppleTalk Phase 2 Introduction and Upgrade Guide". This document was included
in the "LAN Minds, Volume 1" binder under tab 9.
