Apple Internet Router: One Zone Per LocalTalk Port

This article last reviewed: 15 July 1990

TOPIC ---

The beta version of the Internet Router supported four zones on two
physical LocalTalk ports. According the documentation for the Internet
Router version 2.0, and from several articles in the AppleLink Technical
Info Library, it appears that one zone per physical LocalTalk Port is the
new limit. Is this correct? If so, are there any solutions or
workarounds?

DISCUSSION --

Yes, that function was not implemented in the released version of the Apple
Internet Router. To our knowledge the only way you can have more zones
than physical ports is to add another interface card with a port on it.
