Internet Router and EtherTalk: Install Router Software First

Article Created: 21 August 1991

Article Last Updated:

TOPIC -----

I have a problem when trying to install an AppleTalk Internet Router on a Macintosh LC with system software 6.0.7.

I use the Network Products Installer for version 6.0.7, and the AppleTalk Internet Router 2.0. Installation seems to be OK, but when I try to start the router (once it is configured with LocalTalk and Ethernet zones) it displays the message "Can't load MBDF."

DISCUSSION -----

You must install the AppleTalk Internet Router software first, and then the EtherTalk software.
