AlisaTerminal: Now Supports More Zones

This article last reviewed: 17 October 1990

TOPIC ---

We have had a problem with a WAN. The backbone is connected via cisco routers.
They are still mostly at Phase 1. The network worked flawlessly, except for
AlisaTerminal. It would look for the DECnet gateway and then hang. After
numerous attempts to resolve the problem with Alisa, Alisa agreed that
AlisaTerminal had "problems" negotiating with more than 39 zones. (We had a
little over 100.)

DISCUSSION --

Alisa now has an updated AlisaTerminal, available from their Technical Support.
We tested the new AlisaTerminal, and it appears to work with 100 zones. The
new AlisaTerminal has an added function--you can force additional queries of
the network by pressing the Command key and clicking on the Host dialog box.
