Cascading the Ethernet 10T/5 Workgroup Hub (9/95)

Article Created: 25 September 1995

TOPIC ---

This article describes cascading the Ethernet 10T/5 Workgroup Hub.

DISCUSSION --

For proper operation when cascading the Ethernet 10T/5 Workgroup Hub, a port on
the Workgroup Hub should be:

• Connected to the uplink port of the parent hub.

• Connected to a regular port using either a 10-baseT crossover cable,
  or with two 10-baseT cables joined with the Apple Expansion adapter
  (included with the hub).

NOTE: The cascade limits for 10-baseT demand that no packet on the network
travel through more than four hubs or repeating devices. This specification must
NOT be exceeded.
