AppleTalk: Length and Distance Determined by Cabling

```
Article Created: 13 August 1991
Article Last Reviewed:
Article Last Updated:

TOPIC -----------------------------------------------------------

What is the maximum allowable length of a full AppleTalk network from end
to end?

What is the maximum allowable distance from one device to another (that is
from one device to the next device in the chain)

DISCUSSION ------------------------------------------------------

The total length of any AppleTalk network depends on the type of cabling.
AppleTalk is only a set of protocols: the cabling is what determines the
total length and the distance between nodes.
