## AppleTalk for VMS: Use Version 2.0.6 with Pacer 5.2b

Article Created: 16 August 1991

Article Last Reviewed:

Article Last Updated:

TOPIC -----

I installed AppleTalk for VMS 3.0 and am unable to use it when I'm running Pacer 5.2b.

DISCUSSION -----

Pacer 5.2b is a Phase 1 device that takes over the Ethernet card in the VAX when it is running. The two alternatives are to stop running Pacer or to install AppleTalk for VMS version 2.0.6, which is a Phase 1 device.
