AppleTalk: How to Upgrade to Phase 2 to Use PATHWORKS

Article Created: 29 March 1991

Article Last Updated:

TOPIC ---

We need to upgrade our AppleTalk network to Phase 2 to use PATHWORKS. Our
network consists of six zones, five are separated by Shiva NetBridges,
while the other is separated by Cayman GatorBoxes. From what I've read, it
looks like all I need to do is set the GatorBoxes to AppleTalk rout using
Phase 2 instead of Phase 1 for us to be "upgraded." This sounds a bit too
easy.

What else do I need to do? Currently, the only other devices we have are
Macintosh computers, LaserWriter printers, some NetSerials and NetModems,
and a Netway.

DISCUSSION --

Easy is what Macintosh is all about! Phase 2 has to be implemented on
routing devices, so the GatorBox and the Shiva NetBridges also need
upgrading. Check with Shiva on their plans or procedure for upgrading the
NetBridge to Phase 2. That is basically all there is to it; the computers
on the network have no requirement for an upgrade to Phase 2.
