LocalTalk PC Card: AST Rampage and NeStar Compatibility

This article last reviewed: 11 January 1988

Apple Technical Communications is not aware of any problems when using an AST Rampage card or a NeStar net card with a LocalTalk PC card.

However, there are some potential conflicts:

- DRQ, IRQ, and address settings may overlap.
- It's possible that one or both of the mentioned cards will use the same bus lines as the LocalTalk Card.

Parameters on the LocalTalk Card can be reconfigured to include the other card's address range. Instructions for reconfiguring the AppleTalk PC card are in the LocalTalk PC Card manual. Such changes become necessary when the same signal lines are used on two PC boards. There being a small number of data and communication lines available, it is possible for lines to overlap. We suggest you check the documentation of each board with that of the LocalTalk PC Card, and configure one or both as described within the appropriate manual.
