PC Terminal Emulation Over LocalTalk to VAX

This article last reviewed: 21 July 1989

TOPIC -----

A customer has several AppleTalk network combinations (Macintoshes and PCs). They want to do terminal emulation on the PCs over the LocalTalk PC Card to a VAX. Do you know of any products that might handle this?

DISCUSSION -----

TCP/Connect by InterCon supports MS-DOS machines attached to LocalTalk via any of the available cards and includes VT220 emulation. They also have a TCP/Connect for the Macintosh.
