LocalTalk PC Card: Using It for IBM PC-to-VAX Connectivity

This article last reviewed: 12 October 1989

TOPIC ---

Is there any software for an IBM PC with LocalTalk PC Card that allows
communication (terminal emulation/file transfer) with VAX machines not running
AppleTalk for VMS and Alisa/Pacer -- that is, for example, a TCP/IP or VT100
emulation through LocalTalk ->Kinetics FastPath ->Ethernet?

DISCUSSION --

We are not currently aware of such a product.

Since the LocalTalk PC Card sends AFP calls to access the AppleTalk network,
you cannot use it without an AFP-compatible server running on the VAX.

You will probably achieve better performance by connecting to the VAX directly
over Ethernet or -- if that is cost-prohibitive -- over an RS-232 serial
connection using an IBM PC terminal emulation package.
