AppleTalk PC Card: Code Versions and Compatibility

Article Created: 14 May 1991

Article Last Updated:

TOPIC -----

I want to add some AT&T PCs to my AppleTalk network. I have some old AppleTalk PC cards available (part number M2313). They print all right, but I am worried about conflicts with newer versions of the LaserWriter drivers, etc.

The versions on the PC side are:

- AppleTalk PC DA 1.0
- AppleTalk PC Print driver 1.0
- AppleTalk PC Driver 2.0

Are there newer versions than these, and if so, how can I obtain them on an IBM format disk?

DISCUSSION -----

The cards are the same even though the part numbers are different. The issue is what's bundled with the card. Originally, the card had a utility to handle printing. Then the utility was removed from the package and the card was shipped alone. Currently, the card is shipped with AppleShare PC, so it has a different finished goods part number. You should have no problem using a more current version of the print driver.

The AppleTalk PC card is now referred to as the LocalTalk PC Card. For more information on this card, please contact Farallon.

On AppleLink, you can find contact information on a company mentioned in this article by clicking the "Library Index" button in the lower-center of the Tech Info Library search window, then opening the "Third Party Company Directory" folder.
